ABOUT ME

Software Engineer focused on digital product development, with experience designing and implementing REST APIs using Spring Boot, .NET, and NestJS. I have contributed to the development of platforms for the public and academic sectors, applying Clean Architecture, CQRS, SOLID principles, and CI/CD practices to build maintainable, scalable solutions aligned with sound engineering practices. Interested in software architecture, cloud computing, and distributed systems, with my professional growth oriented toward building backend products and mobile applications.

EXPERIENCE

Full Stack Developer (Excellence Intern)

Medellín, Colombia

Gobernación de Antioquia — Secretariat of Security, Justice and Peace February 2026 – June 2026

- Contributed to the development of SISEC-MONITOR, implementing three functional modules end-to-end and adding new features to existing modules.
- Developed the backend in .NET applying Clean Architecture, CQRS (MediatR), Repository Pattern, Unit of Work, and Result Pattern to build a maintainable and scalable solution.
- Modeled business rules for state procurement processes, documenting pre-contractual, contractual, and post-contractual workflows through process diagrams.
- Developed interfaces in React and TypeScript using Material UI, React Hook Form, and Zod to implement dynamic forms, advanced tables, and reusable components.
- Integrated Power BI through a gateway between on-premise servers and implemented authentication with JWT and Azure Active Directory to centralize indicators and manage role-based access.
- Prepared technical documentation for APIs and functional processes to facilitate the platform's maintenance and evolution.

Backend Developer

Medellín, Colombia

Universidad de Antioquia (Ude@ - Virtual Education)

September 2024 – February 2026

- Developed and maintained REST APIs with Spring Boot and NestJS applying Clean Architecture, SOLID principles, and design patterns.
- Collaborated with Product Owners, functional users, and the technical team on requirements gathering and solution design for various University departments.
- Designed data models in PostgreSQL and MariaDB, implementing complex relationships, automatic migrations, and soft delete strategies.
- Implemented JWT authentication, OpenAPI (Swagger) documentation, and unit tests with JUnit, Mockito, and Jest to validate critical services.
- Contributed to the development of academic platforms and collaborated on five websites used by more than 10,000 monthly users.

Programming Tutor

Medellín, Colombia

Código C13 — City of Medellín and private sector partners

July 2023 – December 2023

- Trained and mentored young people from Comuna 13 in programming fundamentals using Java and Python, strengthening logical thinking, problem-solving, and good development practices through hands-on activities and technical mentorship.

TECHNOLOGIES

Backend: Java, Spring Boot, .NET, ASP.NET Core, NodeJS, NestJS, ExpressJS, REST APIs

Frontend & Mobile: React, React Native, TypeScript, Material UI, NativeWind, Expo

Databases & ORMs: PostgreSQL, SQL Server, MariaDB, MySQL, MongoDB, Entity Framework Core, Spring Data JPA, Hibernate, TypeORM, Prisma

Software Quality: JUnit, Mockito, Jest, Vitest, SonarQube, SonarCloud

Cloud & DevOps: Docker, GitHub Actions, AWS (EC2, RDS, S3, Lambda, DynamoDB, Aurora, IAM), Azure DevOps, Azure AD, Linux

Architecture: Clean Architecture, Microservices, CQRS, SOLID, DDD, Design Patterns, Repository Pattern, Unit of Work, CI/CD, Git Flow, Scrum, Kanban, System Design.

TECHNICAL PORTFOLIO

Task Manager API GitHub ↗

.NET 8 · Clean Architecture · CQRS · MediatR · SQL Server · EF Core

REST API built with .NET 8 for task management, designed following Clean Architecture and the CQRS pattern with MediatR. Implements JWT authentication, validation with FluentValidation, OpenAPI documentation, unit tests, and a decoupled architecture focused on maintainability, scalability, and software quality.

Educational Resources API GitHub ↗

NestJS · TypeORM · MariaDB · Docker · JWT · Swagger · Jest

REST API for managing educational resources, developed as a reference implementation based on a professional project carried out at Universidad de Antioquia. The project demonstrates the design of a modular architecture in NestJS, modeling of complex relationships with TypeORM, JWT-based authentication, documentation with Swagger/OpenAPI, unit testing, and execution via Docker.

Bebio — Child Development Monitoring GitHub ↗

React Native · TypeScript · Firebase · Firestore · Google Gemini API

Mobile application developed as a personal product for tracking child development during the early years of life. Integrates Firebase authentication, Cloud Firestore storage, WHO growth curves, Colombia’s PAI vaccination schedule, and an assistant powered by Google Gemini that generates contextualized recommendations based on the child’s information.

EDUCATION

Universidad de Antioquía, Medellin, Colombia 2026
Systems Engineering | **Cumulative GPA: 4.2/5**

Red Hat Training and Certifications, Colombia 2024
Red Hat System Administration I 8.2 (RH124)

LANGUAGES

- Spanish: Native
- English: B2 (in progress). Fluent technical reading, comprehension of specialized documentation, and ability to participate in professional conversations.
